

Felipe Coral Sasso

Software Engineer — Frontend & Backend

felipecsasso@gmail.com | github.com/felipesasso | linkedin.com/in/felipecoralsasso | felipesasso.github.io

ABOUT

Software developer with 6+ years of experience building robust back-end systems with Python and dynamic user interfaces with React.

WORK EXPERIENCE

Software Engineer

Jan 2022 – Present

BairesDev — San Francisco, California, United States · Remote

Specializing in API development with Python and front-end development with React for nearshore software development projects. Client engagements:

Software Engineer

May 2024 – Present

Pinterest (BairesDev Customer) — San Francisco, California, United States

Specializing in front-end development and user experience, leveraging React, TypeScript, and modern styling frameworks to:

- Build, test, and deploy key user-facing features for millions of Pinners (Pinterest users).
- Own the entire lifecycle of components and features, from initial design review to deployment and A/B testing in production.
- Optimize application performance (load times, rendering, bundle size) to ensure a fast and delightful experience on all platforms.
- Collaborate closely with product and design teams to translate complex concepts into intuitive and highly scalable UIs.

Stack: React, TypeScript, GraphQL

Full Stack Software Engineer

Aug 2023 – Jan 2024

Freeplay (BairesDev Customer) — Boulder, Colorado, United States · Remote

Freeplay.ai helps companies integrate, test, manage, and continuously improve applications powered by large language models (LLMs).

- Contributed to the development of new products and features.
- Designed and implemented server-side logic and APIs using Python.
- Developed user interfaces and interactive features using React.js, JavaScript, and TypeScript.
- Designed and implemented SDKs using Python, Node, and Java.
- Actively participated in daily standup meetings and discussions.

Stack: Python, Flask, JavaScript, TypeScript, React, PostgreSQL, SQL, LLMs, Node, Linear, Git, GitHub, Java

Full Stack Software Engineer

May 2022 – Jul 2023

NextRoll (BairesDev Customer) — San Francisco Bay Area · Remote

Worked on RollWorks, a leading B2B marketing platform specializing in account-based marketing and demand generation.

- Contributed to the development of new products and features.
- Developed user interfaces and interactive features using React.js, JavaScript, and TypeScript.
- Designed and implemented server-side logic and APIs using Go and Python.
- Actively participated in daily standup meetings and discussions.

Stack: Python, Flask, Go, JavaScript, React, TypeScript, Jira, Git, GitHub, SQL, PostgreSQL

Python Developer

Mar 2021 – Dec 2021

SenseData — São Paulo, Brazil · Remote

SenseData helps companies build better relationships with their customers.

- Developed and tested APIs using Python and Flask.
- Created interactive dashboards using JavaScript and React.
- Contributed to the development of new products and features.
- Actively participated in daily standup meetings and discussions.

Stack: Python, Flask, Unit testing (unittest, Nose2), JavaScript, React, Jira, Bitbucket, PostgreSQL, SQL, MongoDB

Research Programmer

Feb 2020 – Jan 2021

BC Cancer — Vancouver, Canada

Research Programmer at Canada's Michael Smith Genome Sciences Centre, working on CanDIG (a Canada-wide distributed genomics sharing platform) and a dashboard for the COVID Genomics Network (CanCOGeN).

- Created and tested APIs using Python, Flask, and OpenAPI.
- Created dashboards using JavaScript and React.
- Participated in daily standup meetings and discussions.

Stack: JavaScript, React, Python, Flask, SQLite, Unit testing (PyTest, Nose, unittest), OpenAPI 3.0, Tox, Travis CI

Software Engineer

Mar 2019 – Oct 2019

Cisco Inc — Ottawa, Canada

Developer of Cisco's Genie and pyATS network automation infrastructure.

- Designed, developed, and tested functional and scalable features for Cisco's Python network automation framework.
- Designed and developed parsers for the output of various networking protocols on Cisco's networking devices using RegEx (NX-OS/IOS/IOS-XE/IOS-XR).
- Developed Python scripts for automated tests on Cisco devices.
- Hands-on experience with Cisco routers and switches.
- Worked with project managers, customers, and other team members to identify needs; participated in daily scrum meetings and wrote technical documentation on new features.

Stack: Python, Regex (Python module re), Git, Bitbucket, Agile development, Scrum, Unit testing (Python module unittest)

For work experience before March 2019 and additional information, see LinkedIn: [linkedin.com/in/felipecoralsasso](https://www.linkedin.com/in/felipecoralsasso)

EDUCATION

Master of Computer Science

Mar 2014 – Feb 2016

Federal University of Santa Catarina, Brazil — Florianópolis, Brazil

Coursework: Design and Analysis of Algorithms · Object-Oriented Development with Frameworks, Patterns, and Components

· Public Key Infrastructure and Applications · Theory of Computation
