

Felipe Coral Sasso

ABOUT

Full-stack developer with 6+ years of experience building robust back-end systems with Python and dynamic user interfaces with React.

WORK EXPERIENCE

Pinterest, San Francisco, California, United States - Remove - Software Engineer

May 2024 - Present

Software Engineer at Pinterest specializing in front-end development and user experience. Leveraging React, TypeScript, and modern styling frameworks to:

- Build, test, and deploy key user-facing features for millions of Pinner (Pinterest users).
- Own the entire lifecycle of components and features, from initial design review to deployment and A/B testing in production.
- Optimize application performance (load times, rendering, bundle size) to ensure a fast and delightful experience on all platforms.
- Collaborate closely with product and design teams to translate complex concepts into intuitive and highly scalable UIs.

Stack: React, Typescript, GraphQL

BairesDev, San Francisco, California, United States · Remote - Software Engineer

Jan 2022 - Present

Software Engineer at BairesDev, specializing in API development with Python and front-end development with React for nearshore software development projects. As a Software Engineer for BairesDev, I have worked on the following projects:

Freeplay · Boulder, Colorado, United States · Remote - Full Stack Software Engineer (BairesDev Customer)

Aug 2023 - Jan 2024

Freeplay.ai is a platform designed to help companies integrate, test, manage, and continuously improve applications powered by large language models (LLMs).

Key Responsibilities:

- Contributed to the development of new products and features.
- Back-end Development: Designing and implementing server-side logic and APIs using Python.

- Front-end Development: Developing user interfaces and interactive features using React.js, JavaScript, and TypeScript.
- SDK Development: Designing and implementing SDKs using Python, Node, and Java.
- Actively participated in daily standup meetings and discussions.

Stack: Python, Flask, Javascript, Typescript, React, Postgres, SQL, Large language models (LLM), Node, Linear, Git, GitHub, Java

NextRoll, San Francisco Bay Area · Remote - Full Stack Software Engineer (BairesDev Customer)
May 2022 - Jul 2023

Worked on RollWorks, a leading B2B marketing platform that specializes in account-based marketing and demand generation.

Key Responsibilities:

- Contributed to the development of new products and features.
- Front-end Development: Developing user interfaces and interactive features using React.js, JavaScript, and TypeScript.
- Back-end Development: Designing and implementing server-side logic and APIs using Go and Python.
- Actively participated in daily standup meetings and discussions

Stack: Python, Flask, Go, Javascript, React, Typescript, Jira, Git, GitHub, SQL, Postgres

SenseData, São Paulo, Brazil - Python Developer
March 2021 - December 2021

Python developer working on SenseData, a platform that helps companies build better relationships between themselves and their customers.

Key Responsibilities:

- Developed and tested APIs using Python and Flask
- Actively participated in daily standup meetings and discussions
- Created interactive dashboards using Javascript and React
- Contributed to the development of new products and features.

Stack: Python, Flask, Unit testing (unittest, Nose2), Javascript, React, Jira, Bitbucket, Postgres, SQL, MongoDB

BC Cancer, Vancouver, Canada - Research Programmer
February 2020 - January 2021

Research Programmer at Canada's Michael Smith Genome Sciences Centre. Working on CanDIG¹, a Canada-wide distributed genomics sharing platform, and creating a dashboard for COVID Genomics Network (CanCOGeN) for COVID-19 data visualization.

Key Responsibilities:

- Creation and testing of APIs using Python, Flask, and OpenAPI
- Creation of dashboards using Javascript and React
- Participation in daily standup meetings and discussions

Stack: JavaScript, React, Python, Flask, SQLite, Unit testing (PyTest, Nose, unittest), OpenAPI 3.0, Tox, Travis CI

Cisco Inc, Ottawa, Canada- Software Engineer

March 2019 - October 2019

Developer of Cisco's Genie and pyATS automation infrastructure.

Key Responsibilities:

- Designed, developed, and tested functional and scalable features for Cisco's Python network automation framework
- Designed and developed parsers for the output of various networking protocols on Cisco's networking devices using RegEx (NXOS/IOS/IOSXE/IOSXR)
- Developed Python scripts for automated tests on Cisco devices
- Hands-on experience with Cisco routers and switches
- Worked with project managers, customers, and other team members to identify the needs, participated in daily scrum meetings, and wrote technical documentation on new features

Stack: Python, Regex (Python module re), Git, Bitbucket, Agile development, SCRUM, Unit testing (Python module unittest)

Note:

For work experience before March 2019 and extra information about me, please check my LinkedIn profile at <https://www.linkedin.com/in/felipecoralsasso>

EDUCATION

Federal University of Santa Catarina, Brazil - Master of Computer Science

March 2014 – February 2016 (Florianopolis, Brazil)

Coursework:

- Design and Analysis of Algorithms
- Object-Oriented Development with Frameworks, Patterns, and Components
- Public Key Infrastructure and Applications
- Theory of Computation
